## Methodology and Sample Information

Between October 1st and October 28th, 2018, Issues & Answers Network, Inc. completed 800 telephone interviews among a random sample of adult Arkansans, plus an additional 400 interviews with respondents just in Benton and Washington counties (for a total of 521 Northwest Arkansas respondents). Sixty-one percent of all respondents interviewed use their cell phones for all or most of their calls.

The survey's margin of error statewide is +/- 3.5 percentage points, meaning that we are 95 percent confident that the actual result lies within 3.5 percentage points (in either direction) of the result our sample produced. For the NWA oversample, the margin of error is +/- 4.3 percentage points.

Employing guidelines established by the American Association for Public Opinion Research, the poll's overall cooperation rate was 21.9%. This is lower than in prior years due to the greater volume of calls to cell phone numbers. This figure reflects completed surveys as a percentage of all eligible individuals contacted.<sup>6</sup> As in past years, the sample was provided by Survey Sampling International.

To assess the representativeness of the sample drawn for the poll, the Arkansas Poll team publishes what many polling organizations do not: a comparison of survey respondents' key demographic characteristics to those of the state as a whole. This information is reported in the table below.
